ALFAGOMMA GROUP – AN ACTIVE AND INNOVATIVE OWNER

Alfagomma is a family-owned company founded in 1956. Today, it has approximately 4,800 employees and a turnover of more than EUR 650 million. From its headquarters in Italy, just outside Milan, the global operations are managed, currently including 28 manufacturing plants worldwide.

These plants produce hydraulic hoses, industrial hoses, fittings, ferrules, adapters, and quick couplings in large volumes for many of the world's largest OEM customers. Our products are developed and tested together to ensure correct crimp dimensions, safety, durability, and overall highest quality.

Our production facilities assemble the products and deliver customer-specific solutions for low, medium, and high pressure, such as hybrid solutions, tube bending, welding, hose production, block manufacturing, and power unit assembly.

There is a clear investment and development strategy and a strong ambition to be a leader in product development, production efficiency, and overall processes, where continuous improvement and innovative engineering solutions are an important and natural part of daily operations.

DUNLOP HIFLEX – OUR HISTORY, OUR HERITAGE & OUR BRAND

Dunlop Hiflex is part of the Alfagomma Group, where we share many common synergies. We both have a strong innovative spirit and ingenuity, as well as a powerful brand.

For Dunlop, it all began back in 1887 in Scotland, when John Boyd Dunlop watched his son riding a bicycle along a bumpy gravel road. The bike had solid rubber tires, and the ride was rough and jarring. That's when John came up with the idea to wrap an air-filled rubber tube around the rim – and history was made.

Dunlop Hiflex has been present in Sweden since 1969, with its head office in Halmstad. Much has changed since the beginning, and we proudly carry the brand, the heritage, and our history – all rooted in a Scotsman and an air-filled rubber tube on a bicycle.

HQ, SCANDINAVIA

DUNLOP HIFLEX – OUR OPERATIONS

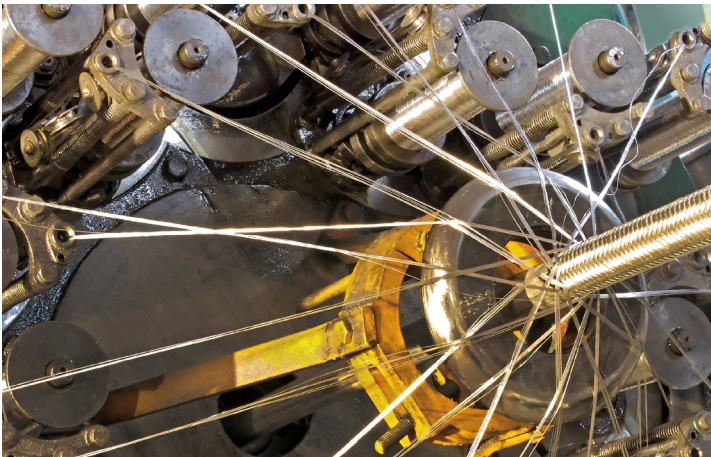

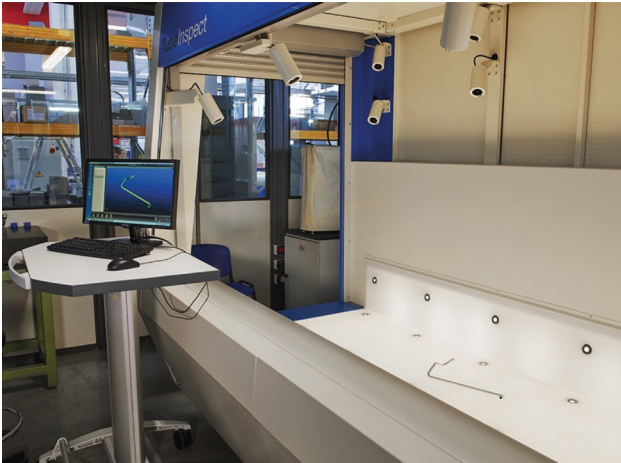

Dunlop Hiflex Scandinavia is headquartered in Halmstad, with a strong local presence throughout the other Scandinavian countries. We operate an efficient production and warehouse facility in Halmstad covering 13,000 square meters, serving as the central distribution hub for all Scandinavian countries. In addition, we have regional warehouses in Norway and Denmark. To meet our customers' needs for proximity and service, we are also present in several locations across Scandinavia with local production, hose service, and retail sales.

We specialize in flow management and hydraulics for low-, medium-, and high-pressure applications.

We take pride in our high-quality products, which we develop, test, and manufacture ourselves, ensuring that every component meets the highest standards. All components are tested together to ensure correct crimp dimensions, safety, quality, and compliance with – or exceeding – existing requirements and regulations.

We offer everything from individual components and spare parts to complete kits and system solutions, including pipe bending, end forming, welding, hose assembly, hybrid solutions, manifold assembly and design, as well as the construction of hydraulic power units – all tailored to the customer's specifications for packaging, labeling, testing, pressure testing, flushing, and logistics.

Our vision – Preferred partner in the Scandinavian Hydraulic & Fluid Conveyance market.

DUNLOP HIFLEX – DRIVES DEVELOPMENT FORWARD

DEVELOPMENT

Alfagomma has a long experience and strategy around innovation and development of products with the goal of being the leading player in the product area of management components and complete system solutions. An important part of supporting this active initiative is to both recruit competence and invest in production efficiency and digitization.

RESEARCH & DEVELOPMENT

We work with continuous improvements. In our advanced and ultra-modern development center in Teramo, our technical team works to develop and create the products of the future.

Our goal is to always exceed international standards to improve product performance, safety and longevity.

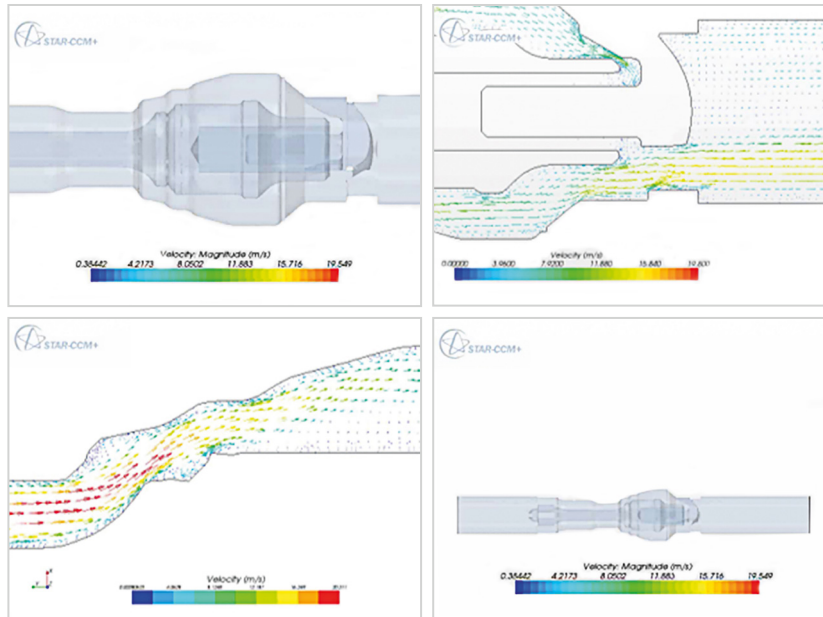

INTELLECTUAL INNOVATION

The success of our Team in research and development and the company's global position can be measured by the number of registered and approved patents.

Today, Alfagomma Group has 72 different registered unique patents.

SIMULATION IN CONNECTION WITH PRODUCT DEVELOPMENT

An important part of our product development and digitalization is the ability to use this software to simulate products during the development phase, before they enter serial production. This allows us to achieve the best possible performance for our customers' various applications.

DUNLOP HIFLEX – OUR BUSINESS SEGMENTS

We divide our operations into three business segments:

SEGMENT MOBILE OEM

SEGMENT STATIONARY OEM

SEGMENT AFTERMARKET

DUNLOP HIFLEX
ALFAGOMMA GROUP

SERVICE PARTNER
// SLANGSERVICE

DUNLOP HIFLEX – OUR BUSINESS SEGMENTS

SEGMENT MOBILE OEM

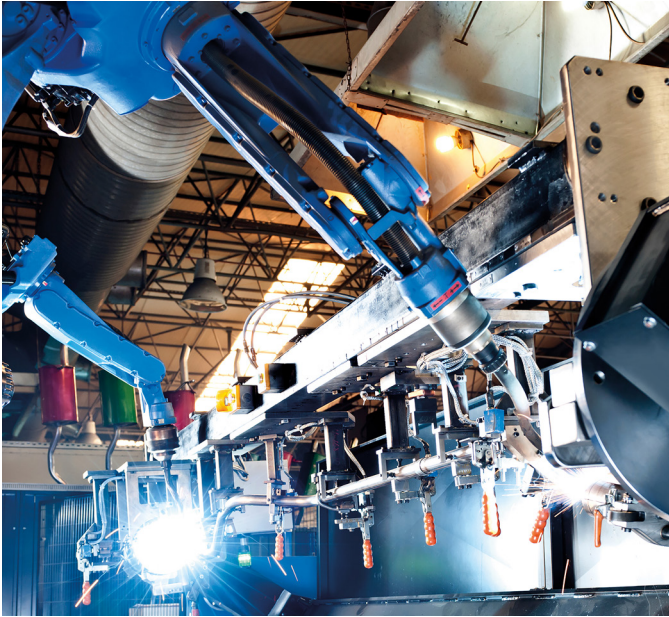

As a global partner to customers involved in the serial production of machines or vehicles, Dunlop Hiflex supports every stage of the manufacturing process. From early development with design and engineering, through prototyping and application review, to tailored logistics solutions.

Together, we identify your needs and respond with design and application reviews, development of customer-specific products, comprehensive solutions that ensure overall quality, operational reliability, system deliveries, logistics, traceability, and aftermarket support – both locally and globally, if desired.

We work in dedicated teams to strengthen our collaboration with you, including project managers, account managers, product managers, design and development engineers, technical support, and category buyers.

We offer a wide range of customized solutions in fluid handling components and hydraulics, including pipe bending, welding, end forming, kit deliveries, line-feed systems, manifold assembly, and hydraulic power units. Additionally, we supply individual hydraulic components, pneumatics, industrial rubber, and power transmission products.

We also offer our customer-specific software, Alfatraka, a powerful tool designed to support the aftermarket, ensure the use of original parts, and minimize unexpected downtime.

DUNLOP HIFLEX – OUR BUSINESS SEGMENTS

SEGMENT STATIONARY OEM

As a global supplier to customers with demanding requirements in industries such as mining, steel production, pulp and paper, wind power, offshore, oil and gas, fishing, and other sectors that place high demands on performance, cleanliness, and safety, we have developed unique, specialized products. These products are designed to withstand higher working pressures, rapid temperature fluctuations, aggressive chemicals, radiation, abnormal wear, environmentally friendly oils, and other factors that significantly impact product lifespan.

We offer support with service, inspections and repairs, labeling and restocking of inventories or local stationary and mobile storage units, preventive maintenance, and technical guidance to ensure the right product is used for each application.

You gain access to service and expertise through our own branches across Scandinavia or via one of our certified Service Partners. We provide technical support, immediate actions to improve efficiency and ensure safe production, as well as on-site service – including fully equipped containers for larger projects or maintenance shutdowns.

We also offer our customer-specific software, Alfatraka, a powerful tool designed to minimize unplanned downtime and ensure smooth planning of service and maintenance, helping to optimize the product lifecycle in critical applications.

DUNLOP HIFLEX – OUR BUSINESS SEGMENTS

SEGMENT AFTERMARKET

We reach our end customers through our own branches, our certified Service Partners, and other authorized resellers. We can deliver your order directly to your specified location through mobile service, you can pre-order and pick up from us, or we can provide a fully equipped container for larger projects. This container functions as a complete hose workshop, stocked with products we replenish according to your needs.

Competence, availability, and flexibility are key principles that guide how we structure our organization and offerings to become the most attractive choice for you as a customer. It's about far more than simply delivering a spare part when something breaks. Service can be intelligent – incorporating foresight, condition-based maintenance, or scheduled service routines.

With our service offering, we aim to provide strong technical expertise and practical solutions to your challenges. We help implement preventive maintenance to minimize unplanned downtime and increase your profitability.

We offer application reviews and suggestions for adjusting maintenance intervals or carrying out assessments to reduce the risk of leakage and extend the lifespan of your products or machines.

We also offer a complete support concept for our Service Partners, including access to store fixtures, workshop equipment, marketing resources, training programs, and framework agreements for complementary shop products. In addition, we provide login access to our web shop, available 24/7, with direct deliveries from our central warehouse in Halmstad.

HYDRAULIC HOSES AND FITTINGS

Dunlop Hiflex offers the market a unique range of in-house manufactured hydraulic hoses and fittings.

The range includes everything from standard hoses to hoses designed for extreme conditions such as severe cold, high temperatures, high pulsating pressures, or where exceptional abrasion resistance is required. All hoses are manufactured according to applicable international standards. All of our crimp fittings and ferrules are developed and tested to be used together, ensuring high operational reliability and quality. We also offer a complete range of thermoplastic hoses for high-pressure applications.

Our product offering includes a full selection of crimp fittings, adapters, quick couplings, and accessories, stocked in the most common thread types such as BSP, DKO, JIC, ORFS, and NPT.

Our in-house manufactured crimp fittings, adapters, and quick couplings are treated with the patented Top Coat surface protection, which far exceeds the ISO standard for corrosion resistance against red rust.

INDUSTRIAL HOSES AND FITTINGS

We manufacture industrial hoses for all types of applications, from simple PVC water hoses to high-tech rubber hoses designed for the offshore and fishing industries. Many of our hoses are specifically developed for demanding applications involving the transport of chemicals, oils, concrete, waste, food, and steam. We can also custom-produce hoses in a wide range of materials and designs based on the customer's specifications.

In addition to our broad range of industrial hoses, we also offer a comprehensive selection of fittings suitable for most applications. These fittings are available in materials such as acid-resistant stainless steel, black steel, bronze, malleable iron, aluminum, brass, and polypropylene.

We guide you in selecting the right hose and fitting combination, based on your specific application.

SPECIAL HOSES AND WELDED METAL HOSES

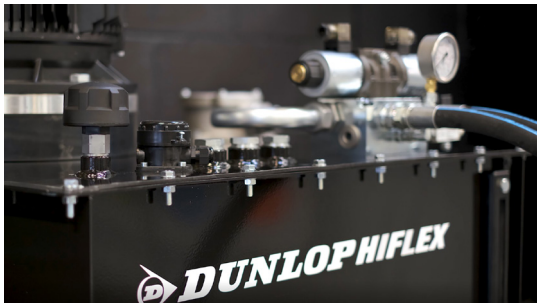

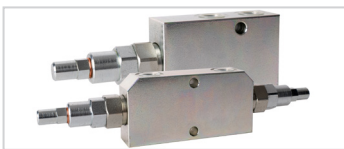

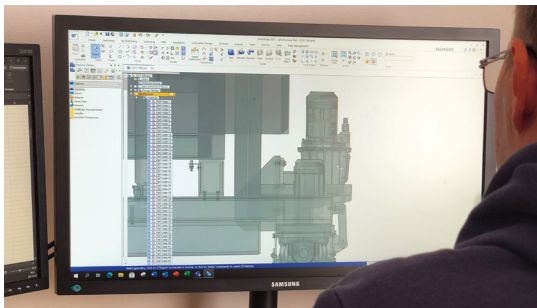

At our new production facility in Helsingborg, we design, weld, and build custom hoses, metal hoses, and composite hoses for a wide range of applications – including the process industry, steel industry, and renewable energy. All products are delivered with full traceability and safety documentation, pressure testing, and certificates.

We tailor, manufacture, and weld a wide variety of fluid and gas transfer systems where high demands are placed on durability, safety, and hygiene.

HYDRAULIC COMPONENTS AND SYSTEM SOLUTIONS

We deliver everything from individual components to complete systems tailored to your specific needs.

We offer technical consultation, design, and drafting of customer-specific system solutions for optimal energy efficiency, as well as construction and installation of hydraulic systems according to your requirements.

With a wide selection of different brands, we are flexible and able to create the best possible solution for you as a customer.

At our own factories in Italy, we manufacture manifold blocks that we design and customize according to your specifications, using components suited specifically for your application.

PNEUMATICS

For certain applications, compressed air is better suited than hydraulics to perform the job where the power requirement is lower or the cleanliness demand is higher. We offer one of the market's broadest ranges of pneumatics tailored to your specific needs.

In addition to our standard program, we provide ATEX-certified products as well as cleanroom-grade products. Our range of cylinders and actuators includes both ISO and VDMA profiles, featuring tie-rod cylinders, compact cylinders, rodless cylinders, and position cylinders. The valve range includes inline valves, solenoid valves, and proportional valves.

We also offer a wide range of air preparation and air treatment products, available in various materials such as brass, stainless steel, and composite materials, adapted specifically for your application.

Our fitting assortment covers push-in fittings, push-on fittings, compression fittings, quick couplings, vacuum products, safety couplings for compressed air, and miniature fittings designed for industries such as food processing, automotive, and general industry.

The hose program includes PA, PUR, PE, and PTFE hoses in versions such as multi-hose, spiral hose, and twin hose.

DUNLOP HIFLEX STORE AND ACCESSORIES RANGE

We offer a wide range of peripheral products through strategic framework agreements with selected suppliers – everything from crimping machines, cutting tools, hose racks, and other equipment for your complete hose workshop, to oils, AdBlue, lifting and load handling, adhesives and sealants, lubrication equipment, gloves, spill-kits, absorbents, cleaning cloths, cable ties, pumps, oil fillers, grease nipples, and various assortment boxes.

In addition, we market and sell one of the world's most renowned brands in power tools – SPX Flow, including Power Team and Bolting. Here we provide a high-quality range of cylinders, Posi Lock pullers, torque wrenches, socket tools, bolt tensioners for torque applications, and a wide selection of pumps tailored to our hydraulic tools.

We can also offer one of the market's most advanced product and system solutions for cleaning equipment, where we customize solutions to your specific needs.

This range is fully displayed in our own branches and is also offered to our Service Partners and other resellers, enabling them to reach end customers with a complete and attractive offering.
