

Environmental Policy

For us, the environment and its well-being are fundamental principles of our business philosophy, and we strive to ensure the best possible living conditions for present and future generations. Therefore, the company has decided to adopt a sustainable development policy with the aim of preventing harm to the environment and reducing any environmental impact by using the best available technology within the limits of our resources, both in production processes and in our products.

The company undertakes to define, implement, and maintain an environmental management system in order to ensure this commitment. The system shall apply to all relevant interested parties identified in the context analysis, in accordance with the ISO 14001:2015 standard. The primary requirement of the environmental management system is to comply with applicable binding requirements for the facilities covered by this policy and to continuously improve the environmental management system in order to strengthen environmental performance.

Within this framework, the company undertakes to define and maintain a system for environmental analysis with the objective of identifying all environmental aspects related to the facilities covered by this policy, as well as their significance in terms of impact under all operating conditions—both normal and abnormal—while considering the entire product life cycle for the facilities covered by this policy. The company therefore considers it essential to involve both suppliers (of raw materials, auxiliary materials, and services) and customers in this work.

The company regards continuous improvement as a central element of all activities and therefore sets annual reduction targets based on the environmental analysis carried out, related to:

- Use of energy resources
- Water consumption
- Hazardous substances in wastewater systems
- Greenhouse gas emissions
- Waste management, particularly recyclable and non-recyclable waste
- Introduction of more health- and environmentally friendly cleaning agents and workshop chemicals

In order to carry out all activities in accordance with the guidelines of this policy, the company also recognizes the important role played by our employees and the local community in the immediate vicinity of our production facilities and undertakes to:

- Ensure the necessary resources for the proper functioning of the environmental management system
- Provide a continuous training plan across all areas
- Maintain a communication system with authorities and the local community to ensure transparency regarding processes and products, as well as mutual cooperation
